INVALID! A Visual Invisible Disability Narrative

Kaleidoscopic Bones

Visual description of the image *Kaleidoscopic Bones*:

This large, muted melancholy toned mural print was created by spinning photo paper while color printing from a medium format negative. The image depicts the artist's surgically removed rib bones on a bed of pointy pencil tips she broke while forcefully and unknowingly drawing herself into disability. This developing process blurred defined shapes into fuzzy, shady layers of bone fragments representing the complex, shifting emotions associated with chronic and episodic invisible disability.
